## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

## **DETAILED ACTION**

### ***Response to Amendment***

1. This Office Action is in response to Applicant's Amendment dated November 14, 2007 in response to USPTO Final Office Action dated July 25, 2007; and further in response to Applicant's comments regarding 'Rejection under U.S.C. 103(a) and Statement of Summary of Examine Interview' included in said Applicant's response.

### ***Allowable Subject Matter***

2. Claims 1 and 4-6 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Relative to claim 1, the major difference between the teachings of the prior art of record (USP 6,208,084, Urakabe et al. and USP 4,612,611, Matthes et al.) and that of the instant invention is that said prior art of record does not teach a display panel driving method for driving a display panel, the display panel including a plurality of row electrode pairs, a plurality of column electrodes arranged intersecting the plurality of row electrode pairs, and capacitive light-emitting elements arranged at intersecting points of the row electrode pairs and the column electrodes, and in which driving is performed by repeating a driving step that comprises a reset step, an addressing step, and a sustain step, wherein: an output terminal of a column electrode drive circuit connected to the column electrodes is connected to a switch having a parasitic diode, and during the period of the sustain step, said output terminal of said column electrode drive circuit is maintained in a high impedance state, and bipolar pulse signals which are a half

cycle out of phase with each other are supplied to each of a first row electrode and a second row electrode that constitute each of the row electrode pairs, wherein a period exists wherein a negative polarity pulse and a positive polarity pulse respectively of said bipolar pulse signals are simultaneously applied to one electrode and the other electrode of each of said row electrode pairs respectively, and wherein a leading edge of said negative polarity pulse applied to said one electrode and a leading edge of said positive polarity pulse applied to said other electrode exist at different timings, and a trailing edge of said negative polarity pulse applied to said one electrode and a trailing edge of said positive polarity pulse applied to said other electrode exist at different timings.

Regarding claim 5, the major difference between the teachings of said the prior art of record and that of the instant invention is that said prior art of record does not teach a display panel driving method for driving a display panel, the display panel including a plurality of row electrode pairs, a plurality of column electrodes arranged intersecting the plurality of row electrode pairs, and capacitive light-emitting elements arranged at intersecting points of the row electrode pairs and the column electrodes, and in which driving is performed by repeating a driving step that comprises a reset step, an addressing step, and a sustain step, wherein: during the period of the sustain step, an output terminal of a column electrode drive circuit connected to the row electrodes is maintained in a high impedance state, and bipolar pulse signals which are a half cycle out of phase with each other are supplied to each of a first row electrode and a second row electrode that constitute each of the row electrode pairs, wherein said period of said sustain step includes a first section in which a potential of one electrode of each of said electrode pairs transfers from a neutral potential to a first potential of a first polarity, a second section, after the completion of said first section, in which a potential of the other electrode of each of said electrode pairs transfers from the neutral potential to a second potential

of a second polarity opposite to said first polarity, a third section, after the completion of said second section, in which said potential of said one electrode stays at said first potential of said first polarity and said potential of said other electrode stays at said second potential of said second polarity for a predetermined period, a fourth section, after the completion of said third section, in which the potential of said other electrode transfers from said second potential of said second polarity to said neutral potential, and a fifth section, after the completion of said fourth section, in which said potential of said one electrode transfers from said first potential of said first polarity to said neutral potential.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Response to Applicant's Remarks***

4. Applicant's remarks regarding claims 1 and 4-6 are rendered moot in light of the allowance of this case.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U. S. Patent No. 6,208,084 Urakabe et al.

U. S. Patent No. 4,612,611 Matthes et al.
